CEA 2.1.3 Shed Design

By Conner Glover

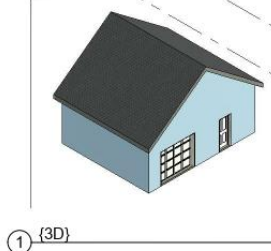

Description of Process

For my first major project in Revit, I feel that I did well but I also feel I could've done better. In my opinion, building isn't very challenging for the most part, but rather the technical aspects are tedious.

I feel like I could do this again without any troubles, but I don't feel like I really knew what I was doing and I just went for whatever worked.

Scale As indicated

Right	Wrong	Learned
● Made a unique shed and worked outside the box ● Revit is advanced with lots of customization. ● Revit is very well documented with many sources to learn about it. ● Revit has many assets available that help to increase the realism of your project ● Revit is the only software you need to design a building	● Finished the shed on time but procrastinated on the slideshow for an obscene amount of time. ● Didn't complete my vision for the shed because of fear of the software. ● Revit is very complicated and it's very hard to understand it without guidance. ● Revit has no built-in help programs ● Revit requires add-ins to do many things that should be normal.	● The presentation really isn't that difficult to make. You just have to write which is an unwelcome change. ● How to create a building with walls, doors, windows, and more. ● How to customize the composition of the shed and make custom textures. ● How to add scenery and make different views with sheets to accompany.
