

CEA 2.3.0 Gingerbread House

By Conner Glover

Design Brief

For this assignment, I was tasked to design a gingerbread house with simple ingredients like graham crackers, frosting, pretzels, and gumdrops. Then, we created a CAD (computer assisted design) in Revit.

Brainstorming

When brainstorming this assignment, I began with the idea that I should optimize my house for Revit design by making a simple square. This first generation house wasn't perfect or structurally stable. As a result, I decided to make a new gingerbread house inspired by my lake house. With my new idea, I set out to create a superb and polished house with hot glue for added structural integrity.

Gingerbread house engineering

Right	Wrong	Learned
• Used hot glue. • 3D scanned the gingerbread house. • Made the Revit house efficiently	• Didn't take enough pictures. • Went through multiple designs. • Spent time on elements that didn't really matter, delaying my work.	• Just focus on the important parts • Don't go through multiple designs.
