

Paper Tower Instant Design Challenge

John Krogman and Conner Glover

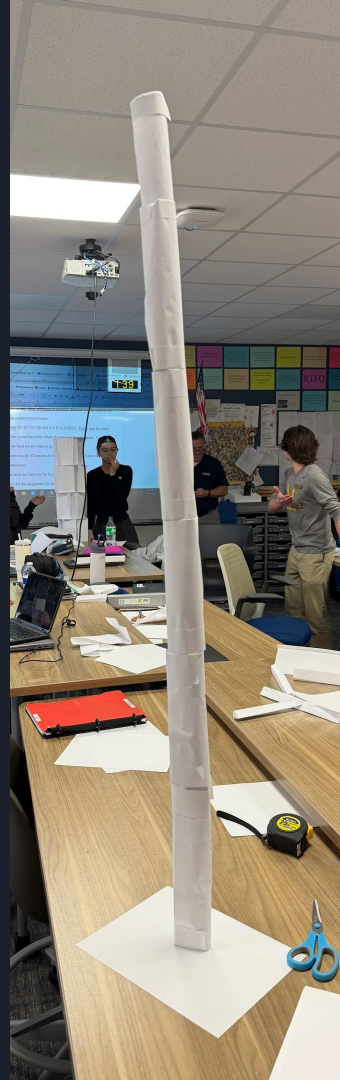

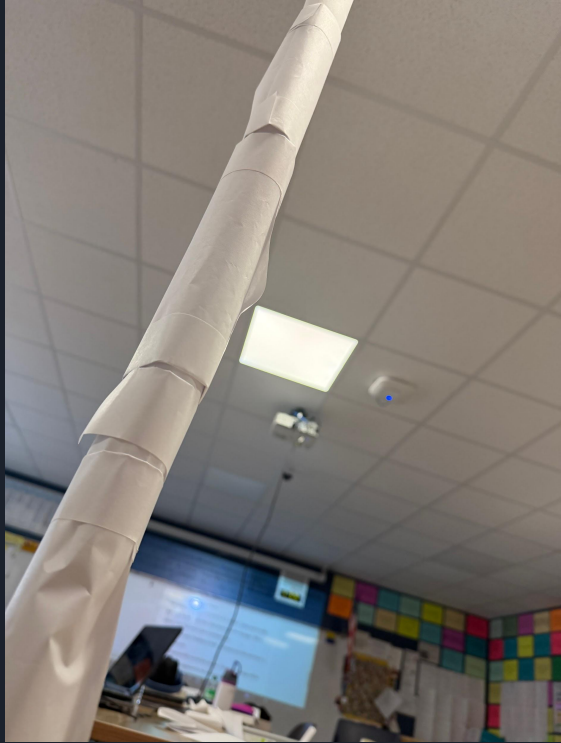

Brainstorming

We first planned what kind of design we were going to build for a sturdy tower. Then Connor said he knew how to fold a paper to make it kind of staple itself. We then got to work by just making as many of the fold as possible and started to stack them.

Pictures

R / W / L

Right - Our folding made the tower sturdy, the tower stood almost the entire time until Johnny accidentally cause it to knock over.

Wrong - Some folds were uneven, and we were rushing to stabilize the tower and fold enough paper in the end.

Learned - We learned that stability matters just as much as height.
