

By Conner, Franco and Ozzy

Roller Coaster Design Challenge

Materials

1. Pool Noodle x4
2. PVC Pipe x1
3. Tape x[too much]
4. Marble x1
5. Scissors x1
6. Red Solo Cup x3

Brainstorming

We spent the majority of our time brainstorming and we came up with several ideas, most failed, some didn't. In the end we just winged it, and it worked (we won). We didn't use any sketches, we instead just expressed our ideas through connecting pipes.

Data

We were successful in most practice runs, however the first couple failed miserably.

We were successful in the final test, and achieved a final time (including boosts) of 16.61 seconds.

Our Final Design

Right/Wrong/Learned

What we did right: We tested out limits when it comes to the the rules, resulting in a good outcome. We discussed ideas with each other to come up with a final design.

What we did wrong: We wasted all of our time at the start and were left with a small period of time to finish it. We sometimes argued over ideas that we should've just tested and listened each other.

What we learned: Try to conserve your time to things other than laughing at someone for stabbing a cup. Be open to more ideas and try to agree on things.

Conclusion

We went a total of 16.5 second and won.
