

1.3.7 IED Paper Bridge Design Challenge

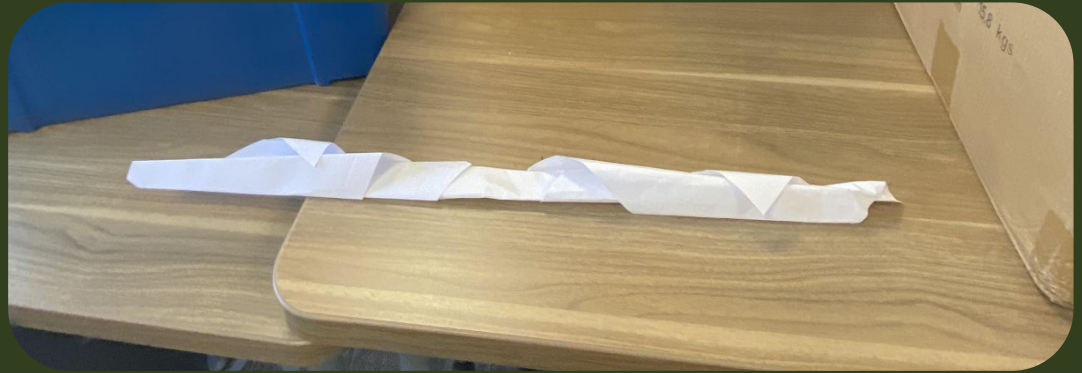

By: Francesco Caringella and Conner Glover

Brainstorming

During our brain storming session, we came up with many ideas. Our original idea was to use the chair as a support for the bridge, this was probably our best idea. But it was unfortunately shut down by Mr. T who claimed that it wasn't allowed, in the case that it was allowed we would have an 82" bridge. But after we had our support idea disqualified, we just made a very strong paper bridge that went between tables as to remove the obstacle of table touching.

Final Bridge

37 Inches Long
Used 2 Tables

R/W/L

Right

- Had the right design.
- Had the right mindset.
- Thought out of the box.

Wrong

- Lost time with invalid designs.
- Folded bad which created worse stability.
- Forgot to get confirmation on some of our questionable ideas.
- Disregarded some of each others ideas when we could have gone further .

Learned

- Focus on the things that seem small but actually help in the end.
- Remain open minded when communicating with your partner.
- Get confirmation before we waste time on things.
