

The background of the slide is a solid light blue color, covered with a repeating pattern of cartoon-style pizza slices. Each slice is yellow with red pepperoni toppings and has a brown crust. The slices are scattered across the entire background, some overlapping each other.

1.1.1 Simple Machine Investigation

By Ryan Frels and Conner Glover

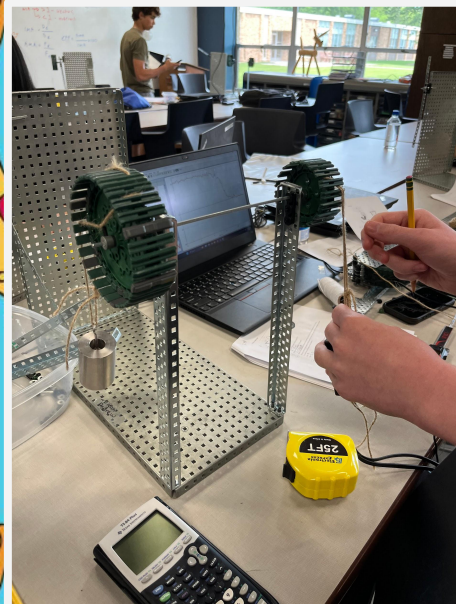

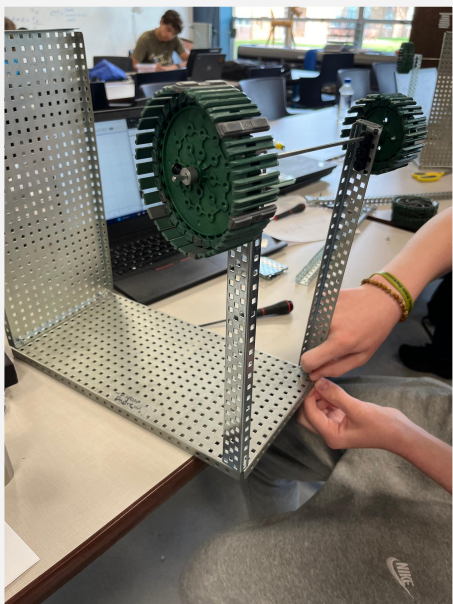

Work

For this project, we created two different simple machines that were used to measure different amounts of force from a weight.

Work Cont.

We Used Logger Pro and a force sensor to give us a precise measurement. We also used a pulley system and ramp that displayed other kinds of simple machines affect force.

Results

	First Class Lever	Second Class Lever	Third Class Lever	Wheel and Axle	Block and Tackle	Inclined Plane
IMA	2.4	2.4	.5	0.675	2	2.4
Idea Effort Force	2.04 N	2.042 N	9.8 N	3.308 N	N/A	2.04 N
AMA	1.8	2.13	.49	3.308	1.75	1.8
Efficiency	66.666...%	88.75%	102.04%	97.2%	87.5%	66.666...%

Right

- Followed instructions.
- Measured all information.
- Created all parts.
- Made a fun presentation
- Took plenty of pictures

Wrong

- A bit confused at the start
- Neglected to do ideal effort force until the end.

Learned

- How to use Logger Pro
- How to calculate IMA, AMA, efficiency, and ideal effort force.
- Learned more about the difference between class 1, 2, 3 slope.
