

1.3.1 PoE Solar Hydrogen Powered Car

Tony Wang and Connor Glover

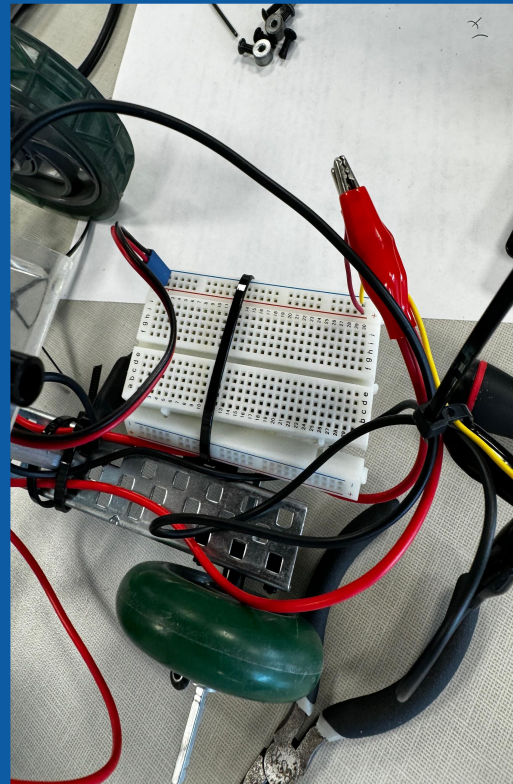

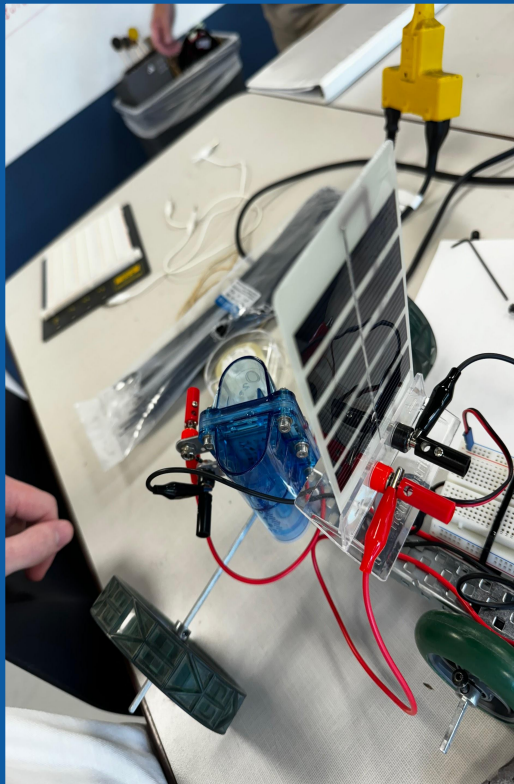

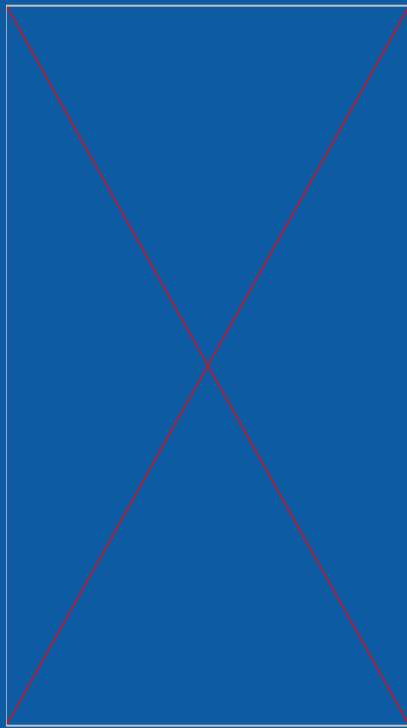

Overview

We were told to make a solar and hydrogen powered car using VEX hardware, breadboards, a solar cell, and a hydrogen fuel cell. We noticed that the fuel cell produced very little electricity compared to the solar cell. Ultimately, our car was successful.

Video

Right

The car was built and successfully tested in a small amount of time

Wrong

The breadboard was faulty and some parts of it didn't work

Learned

We learned how to use a breadboard and how a hydrogen fuel cell works.
